

I own a restaurant. Should I use Orange Guard?

Most definately!!!. Since pests are commonly attracted to where food is, controlling pests in a restaurant can be a full time job. Since the ingredients of Orange Guard are generally recognized as safe by the FDA, there is no better product for controlling pests in a restaurant. It kills pests and repells them so your costs of pest control will be lower and you do not have the worry of possibly contaminating the food you serve.
